WE HAVE BEEN IMPROVING PROCESSES SINCE 2009

We have worked on over 500 successful projects with leading global companies, primarily in plant engineering for the automotive industry, in areas such as measurement systems, battery production, logistics, and more. Over time, our expertise in industrial automation has continued to develop; complex systems are part of our everyday life. Recently, we added a special task force dedicated to semiconductor repairs, installation, and upgrades, expanding our reach into this critical field. We convert large amounts of data into software programs that are becoming increasingly relevant for state-of-the-art production. With each new project, our understanding deepens, allowing us to integrate the latest advances into our solutions. Together with our customers and partners, we work towards optimal solutions to upgrade current standards.

Masterwerk GmbH provides the management & delivery of technical support services globally to the industry.

- Managed resource support services
- Tool decommissioning services
- Parts harvesting & liquidation services
- Decontamination services. (Decon)

PROJECTS COMPLETED IN OUR SEMICONDUCTOR PORTFOLIO

Over the past years, members of our team have worked on projects for some of the most respected companies in the industry. Our achievements reflect the trust placed in us and our consistent ability to deliver successful outcomes in collaboration with these industry leaders.

Semiconductors Technical Support

- •Repairs
- Installation
- •Upgrades
- •Preventive Maintenance
- •Annual Maintenance
- •Onsite support
- •De-installation (Demo)
- •Equipment relocation
- •Tool decommission and refurbishment

Equipment Support

- Front-end processing equipment
- Back-end processing equipment
- Lab equipment
- Facility equipment

Equipment Installation

Equipment installation for semiconductor facilities involves the precise setup and calibration of complex machinery to ensure optimal performance from the start. Our installation services cover everything from initial placement and assembly to fine-tuning equipment settings, ensuring seamless integration into existing systems. With expert technicians and attention to detail, we help minimize downtime and achieve a smooth, efficient start-up for semiconductor manufacturing processes.

Equipment Installation

Cable trunking management and hook up

Process gasses distribution panel

PLC Wiring

Process Support

Our team works alongside operators to monitor, adjust, and fine-tune process parameters, addressing any issues that may arise in real-time. By providing ongoing support and troubleshooting, we help maintain peak performance, reduce production disruptions, and ensure that each phase of the semiconductor manufacturing process operates smoothly and efficiently.

Process Support

Chamber qual and gas callibration

Chamber process kit changes

Process Data Analyzing

By analyzing critical metrics from equipment and processes, we identify patterns, detect potential issues early, and uncover opportunities for optimization. This data-driven approach allows us to support continuous improvement, reduce downtime, and make informed adjustments, ensuring that semiconductor manufacturing meets the highest standards of precision and reliability.

We work on ensuring smooth and precise wafer handling, from transport and loading to alignment and placement within processing equipment. Our support covers equipment adjustments, troubleshooting, and fine-tuning to prevent wafer damage and contamination, maintaining production efficiency and quality. By optimizing handling systems, we help minimize errors and protect valuable materials throughout the manufacturing process.

Troubleshooting

We provide comprehensive troubleshooting services to quickly identify and resolve issues across semiconductor equipment and processes. Our team addresses mechanical, electrical, and software-related problems, ensuring minimal downtime and restoring optimal functionality. Through systematic diagnostics and targeted solutions, we help maintain uninterrupted production and safeguard equipment performance.
